

Composition:Our Mithii River.

In our city there is many rivers like pawai river, Tribi river, Gawai river etc. But there is one river called Mithii river. It is initiated near Andheri. The government has made Mithii river for people's use. But the people use the wrong way of Mithii river. They make the river full of garbage. By throwing garbage, waste things, dirty water etc. Some people made factories at the sight of river, but there is no chimneys at the factories.

The dirty air of factories, mix in the water. Today the more polluting of river is the water of the drain. Today the name of Mithii river is become the water of drain. All the dirty water of river is collected in Mithii river. Therefore, the water of river is become dirty and the pollution is spread everywhere. Some people had make the garbage bin at that place. Today, at that sight of river, some people had diseases and they had become the hunting of that diseases. The government had made that Mithii river for people's profit, but today that river had become the reason of people's diseases. Yesterday year some earthquake, dirty water had goes inside the houses. Because of these some people and children became ill and some of them dead. Some people use that river in the wrong way, and we are becoming ill. Today at the time of profit, Mithii river is giving us loss. Because of this river more problems are in front of us. This river flow in chawl, Road etc. The waste products of factories, house etc, goes inside the rooms, roads are broken because of heavy

We can save our Mithi river by using it properly, not throwing garbage, oil, waste things of factories, houses, dirty water etc. The government had to change places of factories, garbage bin etc. but at other places factories had to make chimneys to not to spread diseases like Tuberculosis, Cholera, Jaundice etc. So, at other places factories had to make chimneys. Some garbage man had to pick up garbage from that place and dig the ground and put all the garbage under the ground and dump it properly. Water is a useful gift of nature from God to us. Like this we can save our Mithi river.
